Natural, water-repellent oil coatings

OLI-AQUA MODU  
Multiple lacquers? A thing of the past -  
MODU is the future!

OLI-AQUA DOMO  
For modern floor designs

## THIS YEAR'S TRADE SHOW FOCUS: OLI-NATURA PROJEKTÖL AND OLI-AQUA MODU

Visit us: OLI LACKE makes its quality brand OLI-NATURA Oils and Waxes the focus of its presentation at the HOLZ HANDWERK trade fair from 24-27 March 2010. In Hall 10.1, stand 213, you will find our universal OLI-NATURA Project Oil for the entire range of interior fittings making a great impression, because it presents itself more efficient and resistant than ever. Instead of merely showing it on samples, we offer our visitors to have a try at the Project Oil in pigmented and unpigmented, so they can see its excellent water and stain resistance as well as its even gloss development for themselves. For the correct application with roller, brush or spray gun, OLI has compiled a Project Oil Guide Book for carpenters and cabinet makers with plenty of expert tips. With the OLI-NATURA brand, OLI is particularly addressing craftsmen and the specialized trade.

In its lacquer section, OLI introduces its new OLI-AQUA MODU. MODU is a clear and colour lacquer system based on the modular design principle for furniture and stair coatings, and it constitutes a new generation of water-based lacquers. Depending on the surface demands and desired properties, it can be applied as a one- or two-component version. By using the MODU system, the number of different products applied can be reduced significantly.

We are looking forward to seeing you!

## NATURAL, WATER-REPELLENT OIL COATINGS

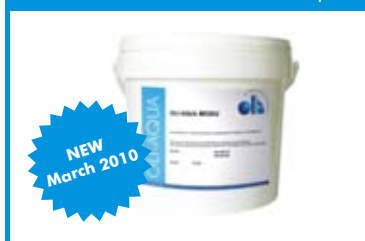

» THE CUSTOMERS OF OUR PROJECT OIL ESPECIALLY APPRECIATE ITS HIGH WATER REPELLENCE, STAIN RESISTANCE AND ITS EVEN GLOSS DEVELOPMENT »

Our universal OLI-NATURA Project Oil for craftsman and semi-industrial application presents itself more efficient and resistant than ever. We further increased its water-repellence and enhanced its productiveness from 40-80 g/sqm to 30-60 g/sqm. This makes Project Oil safer and even more cost-effective. But its appeal lies also in its functionality, because it is suitable for the basic treatment and care of all interior wooden surfaces including wetrooms, as well as for wooden objects outdoors - available in unpigmented and pigmented! While the unpigmented 'nature' version accentuates and intensifies the natural wood colour, you can achieve glazing, rustic or even exotic effects with the 7 UV-resistant pigmented oils. Moreover, all colour shades are intermixable, which offers the user a great colour variety.

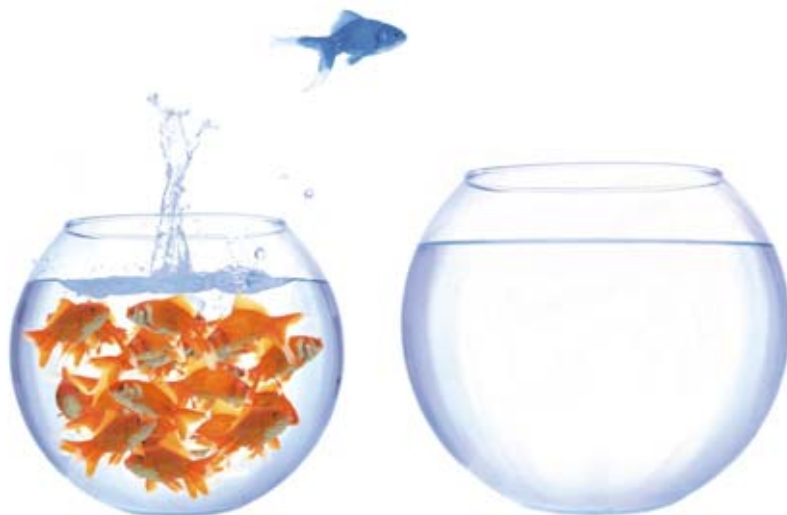

Besides an outstanding gloss development, Project Oil has a high auto-penetration securing an easy application with brush, roller and spray gun. It hardens within the wood and produces a durable bond - a true symbiosis of oil and wood. This makes the surface highly water-repellent, stain resistant, moisture-regulating and breathable. Both look and touch are beautifully natural.

## MULTIPLE LACQUERS? A THING OF THE PAST - OLI-AQUA MODU IS THE FUTURE

» TODAY'S TREND IS NOT TO FOLLOW ANY TREND: THIS PARADOX IS OUR MOTIVATION FOR THE FORMULATION OF LACQUERS AND PAINTS. THE RESULTS ARE FUTURE-ORIENTED PRODUCTS, SUCH AS OLI-AQUA MODU: A MULTI-FUNCTIONAL WATER-BASED LACQUER FOR WOODEN INTERIOR FITTINGS, WHICH CAN REPLACE A NUMBER OF LACQUERS. »

**A** tight core range of products of high functionality and quality hits the zeitgeist, and our new water-based series OLI-AQUA MODU is a model example for it. MODU is a clear and colour lacquer system based on the modular design principle, for perfect furniture and stair coating. Depending on the surface demands and desired properties, you can choose between a one- or two-component application. MODU's appeal is its highly transparent lacquer coat, an elegant accentuation of the pores and a great intensifying effect that particularly highlights dark wood types. A quick drying that allows a prompt, block-free packaging is as natural a property of MODU as is its chemical and mechanical resistance, which can be further enhanced by adding a curing agent. The MODU curing agent does not alter the viscosity level during the application process; it can easily be added by hand and guarantees a large time frame for application of at least 4 hours. MODU is available in 2 viscosity levels: MODU M for furniture and MODU T for stairs and three-dimensional objects. The latter version is thixotropic and forms the basis for the RAL and NCS colour space systems as well as for special colour shades. You can easily coat a number of piece parts or groups of objects with the MODU system. This saves you a good deal of lacquer, which has a positive effect on both the cost effectiveness and ecological factors. Therefore, MODU meets the Decopaint standards of the tightened 2010 version.

# OLI-AQUA FÜLLER

1c insulating filler

Tell me more [www.oli-lacke.de/Products/Furniture&Stairs/Filler 15.88](http://www.oli-lacke.de/Products/Furniture&Stairs/Filler%2015.88)

## THE UNCOMPROMISING FILLER & INSULATING MATERIAL

NO LIMITED POT LIFE; QUICK DRYING; HIGHLY VISCOPLASTIC AND STILL EXCELLENTLY SANDABLE - THOSE ARE ONLY A FEW FACTORS IN THE SUCCESS STORY OF OUR OLI-AQUA FILLER»

**O**LI-AQUA Filler 15.88 is the perfect foundation for the OLI-AQUA MODU B 1c/2c colour lacquer system. With its specific composition, OLI-AQUA Filler is one of the most modern, efficient and productive water-based one-component insulating fillers on the market. It can increasingly play to its full strength in numerous semi-industrial

and serial production lines, because it is predestined for these purposes, having an extremely low proportion of VOCs and very short drying times. It takes only two hours before it can be sanded so that it fulfils the high demands on the time factor, which up to now could only be met by cross-linked (reactive) two-component PU systems. In contrast to those systems with their very short pot lives, OLI-AQUA Filler 15.88 can be used continually without any time limit. Moreover, due to the material's high pigmentation, wood swelling is reduced to a minimum. It is excellently sandable and levels out even deep milled slots in MDF boards and open cut edges. Its bonding strength guarantees thick coats also on edges of 50mm MDF boards after a light 'pre-spraying'.

# OLI-AQUA DOMO

1c Parquet sealer

## DOMO - FOR MODERN FLOOR DESIGNS

« ITS MOST PLEASANT SURFACE FINISH  
ENHANCES THE PARQUET'S BEAUTY AND  
MAKES IT IRRESISTABLY WEAR RESISTANT »

As a novelty, OLI presents a modern, highly aesthetic one-component parquet sealer for modern floor designs in homes. OLI-AQUA DOMO is the ideal parquet sealer for people who love authentic floors. DOMO stands for an en vogue surface finish that combines functionality and aesthetics. With its colour intensifying effect, this water-based lacquer also suits

oak, beech or merbau; it is extremely robust as well as low-maintenance. Its properties are perfectly balanced and guarantee optimum results. DOMOs appeal also lies in its ultra-quick drying and easy application that does not leave any brush marks. Therefore, DOMO is a front-runner in modern floor design and constitutes a new generation of parquet sealers in home areas.

## OLI-NATURA Projektöl

### natural water-repellent oil coatings

In order to protect their feathers against water, ducks use a trick: they impregnate their plumage

...the universal OLI-NATURA Project Oil for outdoor and indoor wood uses the same principle. It protects furniture, stairs and floorboards from water and has an excellent auto-penetration, among many other positive characteristics.

Quick and easy application - you can use a roller, brush or spray gun. Available in unpigmented and pigmented versions, ideal for craftsmen and industrial use.
