NEWS FROM THE LACQUER AND OIL MANUFACTURER OLI

**NEW**

OLI-AQUA TOP+OLI-AQUA GEL  
Trendsetters with brilliant prospects

OLI-NATURA HS Hard wax oil  
An expert for experts: 100% performance - 0% VOC

OLI-AQUA SPORT  
Well-toned with sports certificate

**F**resher than ever, and with a clearer structure of our product range - this is OLI's presentation at the DOMOTEX 2009. For our oil and wax series we created a new Corporate Design and thus a new self-image. The portfolio of high solid parquet oils puts itself in perspective with coloured and uncoloured products as well as with outdoor oils and complete care series.

Highlight is our new OLI-NATURA Hard wax oil, an extremely hard-wearing high solid system with 100% solids for professional parquet recliners, which is based exclusively on natural oils and waxes and does not contain solvents or water. But also our water-based product series OLI-AQUA shows its best performance, particularly our OLI-AQUA TOP, a highly efficient and durable two-component parquet sealer, which is optionally available in a nano-based version for hygienically sensitive areas and in five gloss levels from ultra matt to glossy.

With its certification in accordance with the sliding friction coefficient, OLI-AQUA SPORT presents itself in peak condition, too, and as winner on all sports parquet floors.

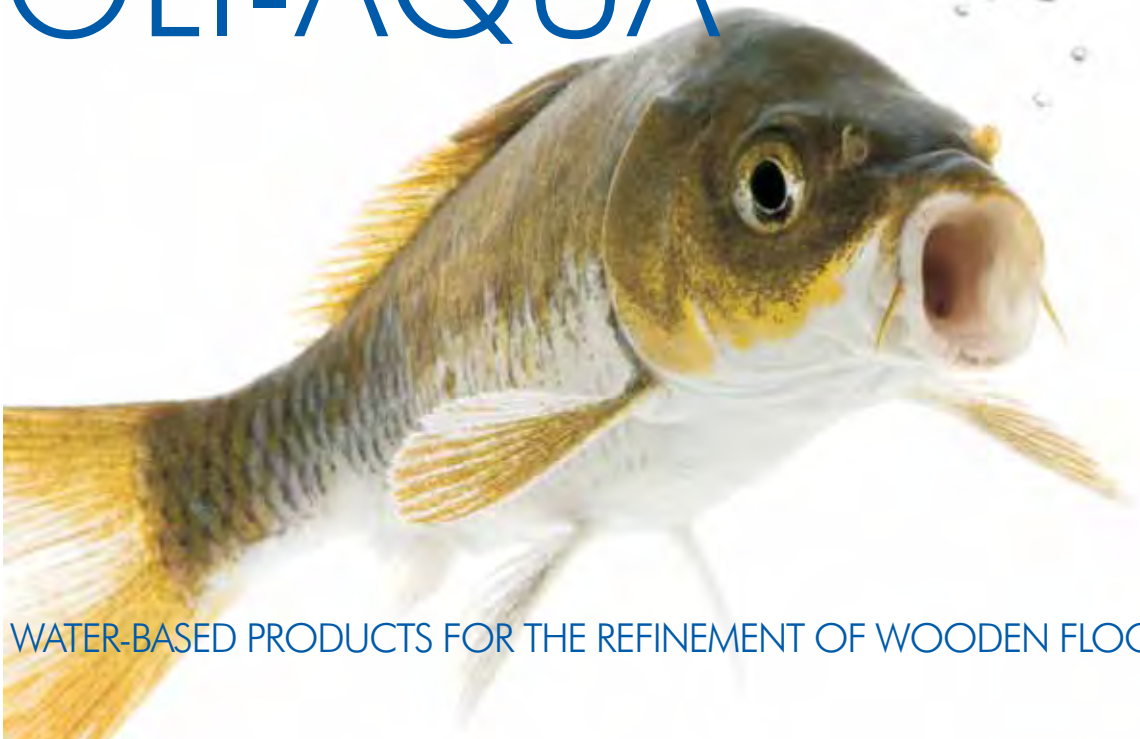

The 'sports package' additionally contains line marking paints as well as a cleaning and care product certified in accordance with the sports hall standard.

Naturally, we will not miss out the trend of 'parquet colouration' at the trade show, introducing modern systems, such as OLI-NATURA colour oil together with OLI-AQUA parquet sealers or OLI-AQUA colour stains together with OLI-NATURA HS professional oil. After all, OLI-NATURA and OLI-AQUA have one thing in common: both brands offer the professional user a complete range of high-quality surface protection systems for parquet and wooden floors that can be combined according to the modular principle. Detailed information at the trade show!

**See you at the DOMOTEX!**

# OLI-AQUA

## WATER-BASED PRODUCTS FOR THE REFINEMENT OF WOODEN FLOORS

Our OLI-AQUA series offers the professional user a complete water-based product range of high-quality sealers, primers, putty as well as cleaning and care products for parquet and wooden floors. Due to modern and future-oriented raw materials, these systems have an excellent performance and meet highest demands, e.g. on hygiene and skid resistance. Moreover, they stand out due to their even spreading qualities without brush marks and they convince you by their first class finish.

In 2006, OLI established a portfolio of NMP-free W2 surface protection systems, which have been in use by professional wood workers with success since. These VOC compliant systems can be applied on wooden floors in domestic areas as well as in shops, but also in hygienically sensitive areas like hospitals. The product names ECONOMY, STANDARD, TOP and SPORT already allude to their core competencies.

Particularly our modern **OLI-AQUA TOP** 2c parquet sealer shows its palpable and, more than that, its inherent qualities. It contains highly functional NMP-free

polyurethane dispersions, which produce an extremely hard-wearing and durable parquet surface. Therefore, OLI-AQUA TOP, certified in accordance with the Ö-Norm standard C 2354, is ideally suitable for demanding and highly frequented parquet, wooden and cork floors in museums and hotels. For the application in hygienically sensitive areas, silver ions can be added to the lacquer in order to produce a durable antibacterial and antimycotic effect. This effect was tested and verified by an independent institute. In addition to that, TOP is also available in two safety versions in compliance with the skid resistance standards R9 and R10 according to DIN 51130. Finally, we introduced five gloss levels from ultra matt to glossy because ultra matt lacquer surfaces gain ground in Germany while in many export markets, glossy systems with closed wood pores are increasingly sought-after.

# OLI-NATURA

## OILS & WAXES FOR THE REFINEMENT OF WOODEN FLOORS

With the quality brand OLI-NATURA, OLI offers the professional user a complete programme of modern and oxidatively drying oils & waxes, based on plant and close-to-nature raw materials that provide for the protection and care of woodwork in- and outdoors. All OLI-NATURA oils & waxes are subject to stringent tests and quality controls and neither contain biocidal substances nor preservatives. The dried material is completely safe to use and represents no health hazard for man, animals or plants. It is in compliance with DIN EN 71-3 (safety for children's toys) and - unpigmented - DIN 53160 (sweat and saliva resistant). OLI-NATURA oils can also be combined with many OLI-AQUA sealers using the modular principle - a trend that increasingly gains ground.

Besides a classic hard wax oil, our OLI-NATURA flooring portfolio now offers a new, VOC-free high solid hard wax oil

for professional parquet recliners. Our colourless high solid professional oil and the high solid colour oils in 7 modern colour shades for a coloured parquet treatment are also composed virtually without VOC. These floor oils colour and protect the wood in one work step and are particularly suitable for the basic treatment of floors subject to intensive wear.

For maintenance and care we offer a complete care and cleaning series and for applications outdoors OLI-NATURA also always has the adequate products. After a cleaning with OLI-NATURA outdoor cleaner, OLI recommends the use of our UV stable OLI-NATURA yacht & teak oil that is available in colourless and coloured.

# SPORTS

## SURFACE PROTECTION SYSTEMS FOR SPORTS PARQUET FLOORS

For most indoor sports, the gymnasium floor plays a decisive role. Basketball players, for instance, prefer a hard wooden floor to show their best performance. Therefore, the sealer has to be a high performer, too, before it is allowed to enter the sports hall. In this respect, the sports hall standard DIN 18032-2 is indispensable. For this purpose, OLI offers two different full ranges of products that are certified for sports parquet: a conventional system and a water-based one.

**OLI-KS parquet sealer**, certified in accordance with DIN 18032-2, is part of the conventional programme. Due to its high proportion of solids, it meets the standards of the ChemVOCFarbV. This solvent- and synthetic resin-based sealer has a low tension, for which reason an initial priming of the sports parquet is not necessary. Within this system, OLI offers compatible line marking paints in yellow, red, blue, green, orange, white and black that can

be applied as an intermediate coat. For maintenance and care, OLI recommends its OLI-AQUA Polish sports floor care.

As an alternative to that, OLI provides a modern water-based product range for sports floors. **OLI-AQUA SPORT** is an extremely hard-wearing, two-component water-based lacquer that meets the sliding friction coefficient according to DIN 18032-2. Our OLI-AQUA 2c line marking paint in 7 colours is perfectly compatible with it and can be applied as an intermediate coat or even on top of the finishing coat. This range of products is complemented by our OLI-

AQUA Polish sport, a care product certified according to the sports hall standard. It can be applied undiluted as basic care or diluted with water as maintenance care. Note: For sports parquet floors, OLI recommends the application of a priming coat of OLI-AQUA primer.

# COLOR

## COLOURATIONS FOR THE COLOURED TREATMENT OF PARQUET FLOORS

While until recently, craftsman-made parquet colourations were rather an exception than the rule, they are now part of the standard repertoire of parquet recliners and not a rare procedure anymore. Parquet colourations have become a real trend, which is not only a matter of pure colour, but above all one of visual effects being purposefully added to the floor. The effects range from rustic over lime white to elegant.

hand **OLI-FloorColor**, a solvent-based stain with an elegant look and levelling effect that covers up the natural wood grain. For achieving this elegant look and protecting the colouration, the application of an overcoat of OLI-AQUA parquet sealers is necessary.

These highly various effects that are achieved by either highlighting the wood pore or by producing a levelling coat can hardly be provided by only one colouring system. Therefore, OLI offers you two colouration systems: on the one hand our **OLI-NATURA HS colour oil** for rustic floors of a strong character with a vivid and natural pore structure, which can be applied as an oil finish or overcoated with OLI-AQUA parquet sealers; on the other

Another possibility for colouring parquet floors are water-based colour stains made by OLI. These products are easy to apply and have an appealing look. However, in order to increase their bonding strength, an undercoat of a solvent-based primer must be applied - which is an additional work step and means more material consumption. As a topcoat, you should apply a water-based sealer.

# INDUSTRY

## OIL FINISH FOR MACHINE-REFINED PARQUET FLOORING

Did you know that the two high solid oils **OLI-NATURA HS professional oil** and **OLI-NATURA HS colour oil** are also ideally suitable for parquet coating by rolling machine? We would like to demonstrate this at the example of a processing line of the company Axel Wirth Maschinen (Fig. 1).

The company Axel Wirth

Maschinen, based in Oberkochen, is one of the leading providers of compact oil and wax application machines. The new rolling machine LW 100 with application unit was specifically designed for manufacturers of floorboards and parquet floors (Fig. 2). The machine is a combination of rolling machine, conveyor belt and rotating, daisy-chained application heads. Optionally, an infrared pre-heating zone can be connected ahead, which gently warms up the wood in order to open the wood pores and thus enhance its absorbency and the penetration of the oil. Due to the infinitely variable roll pressure the amount of oil applied can be adapted precisely so that a waste of

material is avoided. Afterwards, the woodwork is automatically transferred to the application unit, where rotating disc-shaped brushes and pads, 400 or 635 mm in diameter, work in the oil evenly and deeply (cf. Fig. 2). In

combination with the evenly thin amounts of oil applied by rolling machine and rotating brushes, OLI-NATURA

HS professional oil and OLI-NATURA HS colour oil produce optimal coating results. The low overall consumption of these oils of 30 g/sqm for two applications, together with extremely low emission values predestines these products for rational mass production.

# NEW

## OLI-AQUA labels with new design

Our OLI-AQUA care and cleaning products start with a fresh look into the new year. They present themselves in a modern, more basic design and with new images, but they still maintain their brand recognition. Due to a gently reworked typeface, the labels now form a more harmonious entity. Together with the new label design, we also slightly modified the product names: CARE, POLISH or CLEAN refer to the products' core competencies and are understood all around the world.

A rejuvenated design is also envisaged for the other OLI-AQUA surface protection systems. The labels are to receive a

facelift in the first half of the year 2009. We let our visitors at the DOMOTEX vote on how exactly they will look like in the future! They have the choice between the current label and two new alternatives.

New and old label

## OLI-AQUA TOP + OLI-AQUA GEL: Trendsetters with brilliant prospects

OLI now offers the two-component OLI-AQUA TOP sealer also in the gloss level *high gloss*. In combination with our new OLI-AQUA GEL you can achieve closed-pore, high-gloss parquet surfaces that are in great demand in many export markets.

## OLI-AQUA GEL

This high-build, thixotropic, water-based gel for application by spatula can be applied as ultra-fast primer for a rational "one-day-treatment" or as particularly high-build and levelling intermediate coat after the sanding of the lacquer. Due to its high level of transparency together with the properties named above, OLI-AQUA GEL 15.60 is also suitable as a well bonding basic primer for glossy parquet sealers.

## OLI-NATURA HS hard wax oil: an expert for experts

OLI-NATURA HS hard wax oil is OLI's new high solid oil-wax-combination for professional parquet recliners. This product is VOC-free and has a proportion of solids of nearly 100%. While the oil penetrates deeply into the wood, the wax remains on the surface and produces a silk gloss that can be

further intensified by polishing. The surface consolidated in this way becomes extremely hard-wearing, durable, easy to maintain, water-repellent and resistant to dirt. The pores are not closed so that the wood is still able to breathe and produces a healthy room climate. OLI-NATURA HS stays longer on the surface than

conventional hard wax oils and can be worked in by pad also after 90 minutes. Therefore, this impregnation is particularly suitable for larger - especially business or public - areas.

# INFOS

We will gladly send you further information on our surface protection systems for wooden, parquet and cork floors. You can also visit us at the DOMOTEX, 17-20 January 2009, **hall 8 stand A09**. Make use of our expert knowledge and consultation service, we are looking forward to your visit!
